EDUCATION

University of California, Los Angeles (UCLA)
B.S. Statistics and Data Science, Minor in Data Engineering

June 2026
GPA: 3.9

EXPERIENCE

Rambus

June 2026 – Present

AI & Data Intern

- Developing an enterprise master agent that orchestrates **8+ specialized agents** using Microsoft Agent Framework in **Python**
- Integrated **MCP** tool calling (ServiceNow, etc.) with structured outputs so agents query and act on enterprise systems directly
- Engineered agent handoff authentication to reduce **M365 Copilot** licensing spend across internal teams saving **~\$18K/yr**
- Created an AI credit-check tool scraping financial documents & generating reports, cutting reviews from **~6 hrs** to **2 mins**
- Deploying the tool to an internal **Linux** server backed with **PostgreSQL**, serving **10+** analysts across sales and finance teams

Corsair

June 2025 – May 2026

AI Engineer – Part Time

- Benchmarked LLMs (Anthropic, OpenAI) on **AWS Bedrock** for accuracy, latency, & cost, cutting **~\$10k/mth** in token spend
- Developed app scraping **2M+** Best Buy, Amazon & Reddit records updating daily into a dashboard with AI summaries & reports
- Auto-routed negative-sentiment posts to a **Microsoft Teams** channel with deep links, cutting time for customer support

AI Engineering Intern

- Built a local enterprise LLM chatbot with Retrieval-Augmented Generation (**RAG**) for instant knowledge access in **Python**
- Reduced manual document searches from **~30 minutes** to **3-5 seconds** via deployment to IT, Validations, & Engineering teams
- Integrated **REST APIs** to index information from **SharePoint** and **Atlassian**, processing **100TB+** of docs, tables, & slides
- Engineered RAG pipelines with **Hugging Face** Transformers, and **PyTorch** for semantic embeddings and response generation
- Improved internal data retrieval accuracy by **95%** with chunk reranking, department-aware access control, and metadata filtering
- Utilized Git for version control, leveraging **vLLM** for optimized inference on **Linux/WSL**, containerizing services in **Docker**

Dune Road Capital

June 2024 – September 2024

Data Science Intern

- Researched the **AI landscape**, analyzing data sources, platforms, and state-of-the-art models for financial applications
- Explored and tested **time-series models** in **Python**, benchmarking against LLM-based approaches for financial forecasting
- Compared AI-themed ETFs, evaluating their holdings, strategies, and market positioning to assess how funds incorporate AI
- Advised senior leadership on how **AI agents** could operate collaboratively in a multi-strategy firm environment

PROJECTS

AWS Covid Analysis | Amazon RDS, S3, EC2, QuickSight, MySQL

- Designed a scalable data pipeline to process COVID-19 data using **Amazon RDS & S3** for data storage & retrieval
- Applied **EC2** for running **MySQL** queries, data processing, and transforming large datasets into manageable formats
- Connected **AWS RDS** to **MySQL Workbench** for database management and visualization of real-time data
- Developed an interactive dashboard in **AWS QuickSight** to visualize key pandemic metrics across regions

Book Recommendation Web Application | Python, pandas, MongoDB, transformers, BERT, Google Books API

- Developed a web app connecting 100+ readers, fostering community, and promoting youth engagement with books
- Built a custom **LLM-powered** recommendation engine that increased personalized book suggestions by 75%
- Managed user data for 10,000+ libraries, interactions, and connections with **MongoDB** for 99.9% uptime
- Enhanced backend with **Google Book API** and **REST API** integration, boosting content delivery speed by 25%

SKILLS

Programming Languages: Python (pandas, numpy, scikit-learn, plotly, tensorflow), SQL, R, Java, C++, JavaScript

Tools: Git, Tableau, Power BI, Excel, AWS, Docker

Interests: Volleyball, Rock Climbing (Bouldering), Graphic Design, Catan, Cooking
